

Black Box Testing - Team 4

Matthew Lenartowicz, Tylér Gríkas, Aaron Dierking, Evan Tragesser, Guntas Grewal, Jacob Nord-Land

Main Tab

#	Description	Severity
1	Clicking on the “Find a friend” text box does not automatically clear the “Find a friend” text. When you start typing, it includes the text.	3
2	When you type non-alphanumeric characters into the “Find a friend” text box, it jumps the cursor to the far left of the text and puts the non-alphanumeric characters there. When you then type alphanumeric characters, the cursor jumps back to the far right of the text.	3
3	When deleting characters from the “Find a friend” text box, the alphanumeric characters delete normally but the non-alphanumeric need to be deleted from the left side. So, the cursor jumps around when deleting.	3
4	Searching for friends doesn’t do anything.	1
5	Logging in to an account does not show your own data, it is instead shared between all users on the computer.	1
6	After logging in, your username is a button. Clicking this button seemingly does nothing.	3

Home Tab

#	Description	Severity
1	When entering a count for the activity on the homepage, if the user enters an invalid input there is no message or dialog box that tells the user why the count was not updated.	3
2	You cannot edit the value of “Count1” when adding activities	2
3	Cannot remove activities from the plan	1
4	You must restart the app to make the graph show your actual stats for the day.	1
5	When you sort a column by “Count 1” or “Count 2”, an input box pops up for you to edit the count for the latest activity you entered.	2
6	The X axis for the graph on the homepage is incorrect and skips from the current day to the same day in the previous month.	2

7	When Adding new activities, the provided count value is only applied to the Count 2 column.	3
8	Immediately after creating an activity with a pipe character in it (see Plan Tab defect #6), if you add the activity to the Plan for Today (and other activities), they will be cleared if you close and re-open the app.	3

Plan Tab

#	Description	Severity
1	The clear button does not do anything.	1
2	Plans can be entered with a negative count.	3
3	When you add a few activities to your plan and attempt to view them on the Stat page, the activities do not show up in the drop down menu of the Stat page.	1
4	Plans can be entered with a count of 0.	3
5	When you edit the weekly plan, click and drag an activity, then release it in the day it was originally in, the activity disappears.	2
6	If you create a new activity with a name containing a pipe character (' '), the name will cut off everything after and including the pipe.	3

Stat Page

#	Description	Severity
1	The "Week" option shows the data from the tail end of the month (~3 weeks ago) and then jumps to the current date rather than the previous week.	2
2	The "Public" checkbox does not change the content on the graph.	2
3	When switching between the "Week" and "Month" views, the selected activity switches back to the first activity listed in the drop-down menu	2
4	Stat page activity drop down menu doesn't show all the activities that you created.	3

Share

#	Description	Severity
---	-------------	----------

1	Clicking on any of the filters on the left makes all of the requests disappear. You then have to close the app and reopen it for the content to reappear.	1
2	Training plans and comments don't refresh until closing and re-opening the app	2
3	When adding a comment and giving the plan a rating, the ratings don't update or refresh without closing and re-opening the app.	2
4	When you click on a plan, only some of the plans show a plan detailed view.	1
5	Comments only show for some plans. Other plans will not show any comments.	1

Wishlist

#	Description	Severity
1	Attempting to minimize the Plan Detail window (clicking the - button) does not minimize the window.	3
2	To view your most current wish list, you have to restart the application	1
3	When you click on an item in your wishlist, in the Plan Detail page the activities that are displayed are the same ones, no matter what plan you choose or add to the list. If you click apply though, the correct activities are displayed.	2
4	When you attempt to delete a plan from your wishlist, it does not get removed from your wishlist.	2
5	When you maximize the Plan Detail page, the contents of the window do not resize with it, so it is "scrunched" up in the top left.	3
6	When restarting the application, your wishlist does not stay saved when you log back in.	2
